

# Manipulating String

## Escape Character

An escape character is created by typing a backslash ' \ ' followed by the character you want to insert.

```
[2]: print('Hello world')# Single Quote
```

```
Hello world
```

```
[19]: print("Hello,World\\Hello Python\\")# Backslash
```

```
Hello,World\Hello Python\
```

```
[17]: print("Hello World\nHello Python\n")# new Line
```

```
Hello World
Hello Python
```

```
[18]: print("Hello world\tHello Python\t")#tab
```

```
Hello world      Hello Python
```

```
[20]: print("Hello World\bHello Python\b")#backspace
```

```
Hello WorlHello Pytho
```

```
[21]: print("Hello World\rHello Python\r")# Carriage return
```
